

[New Texas Energy Codes are coming in September! Are you ready?](#)

Texas recently signed into law new energy codes for homes based on the 2015 IECC guidelines. To meet these new standards, a cost effective air sealing solution is a must. EcoSeal Plus from Knauf is a great product to help you meet the challenge- it's quick to install with minimal cleanup and can meet the toughest air sealing requirements.

- EcoSeal is a water-based sealant that contains no solvents or hazardous materials and requires no protective suit or mask to install.
- Won't wear down over time as the material is flexible and durable- comes with a limited lifetime warranty when installed by an EcoSeal qualified installer.
- Easy installation in a single pass, faster than caulking and cheaper than foam when paired with fiberglass batts or blown in insulation.
- Wide range of application temperatures from 20° F to 115° F makes it perfect for installation in any season.
- Low entry cost: \$4,500 covers the cost of an airless spray rig with hoses and attachments.
- Simple to clean, just soak wands and tips in water overnight.

Don't wait til it's too late! EcoSeal is the cost effective way to meet the toughest new energy codes, and Knauf representatives are available to train and certify qualified contractors.

EcoSeal is environmentally friendly and rated for fire and smoke so your customers can rest easy. You'll be able to rest easy too knowing you've got the product to get the job done quickly and safely. Call us at any of our Insulating Products, Inc. branches today to learn more!
